

Data Flow Diagram

Date	29 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Data Flow Diagram:

Design note: fact verification happens before generation and feeds directly into it as grounding context. The generated starter is fact-checked by construction, not verified after the user already has it. The standalone fact-check path supports the separate "quick research" use case from the original scenarios, independent of starter generation.
