

Technology Stack

Date	29 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	2 Marks

Technology Stack:

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1.	Frontend / Client-Side	Streamlit	Rapid Python-native UI development, no separate frontend framework needed, ideal for a short capstone timeline
2.	Backend / Server-Side	FastAPI (Python)	Async-ready, auto-generates Swagger docs for easy endpoint testing, lightweight for a small local service
3.	Database / Data Storage	Local JSON files	Sufficient for a single-user local demo; avoids the overhead of setting up a relational database at this scope
4.	Cloud / Hosting / Deployment	Local deployment only (localhost)	Capstone requirement specifies local deployment and demonstration; no cloud hosting needed for evaluation
5.	Version Control & CI/CD	Git & GitHub	Standard for tracking changes and submitting the project repo for mentor review. No CI/CD pipeline required at this scope
6.	Third Party APIs / Other tools	Wikipedia Search & Lookup API, Hugging Face Transformers (DistilBERT, GPT-2 Small)	Wikipedia API grounds generated content in verifiable facts. Hugging Face Transformers provides pretrained NLP models for theme extraction and text generation without training from scratch
