

Problem-Solution Fit

Date	29 June 2026
Team ID	
Project Name	Personalized Networking Assistant
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

1. Customer Segment(s) [CS] Students, early-career professionals, and introverted attendees at professional/social networking events (conferences, meetups, career fairs)	6. Customer Limitations [CL] No budget for premium coaching/consultants; limited to smartphone/laptop with internet access; very limited prep time (minutes, not hours) before an event	5. Available Solutions Pros/ Cons [AS] Generic AI chatbots are flexible, but require manual prompting and give no event-specific grounding. Static networking-advice blogs are free and easy, but generic and not personalized or fact-checked
2. Problem/Pains + its Frequency [PR] Struggles to open conversations with unfamiliar attendees which is recurring at nearly every networking event attended, not a one-off issue	9. Problem root/Cause [RC] No structured, fast way to convert an event's theme and personal interests into a specific, fact-grounded opening line so prep is entirely manual and last-minute	7. Behaviour + it's intensity [BE] Defaults to sticking with people already known, scrolling phone to avoid interaction, or leaving early—high-intensity avoidance under social pressure
3. Triggers to act [TR] Receiving an event invite/registration confirmation; arriving and seeing unfamiliar faces; realizing minutes before the event there are no prepared talking points	10. Your Solution [SL] <u>Personalized Networking Assistant</u> which extracts event themes automatically, grounds them in verified Wikipedia facts, and generates tailored conversation starters in under a minute	8. Channels of Behaviour [CH] ONLINE: browses event listings, LinkedIn, searches "how to network better."

4. Emotions Before/After [EM] <u>Before:</u> anxious, self-conscious, overwhelmed. <u>After using the solution:</u> more confident, prepared, less prone to avoidance		OFFLINE: stands near refreshments/exits, avoids initiating conversation in person
